SUMMARY

Computer Science Engineering graduate with hands-on knowledge of Python, JavaScript, Object-Oriented Programming, Data Structures, SQL, MySQL, and full-stack web technologies. Experienced in developing Python applications, database-driven systems, and machine-learning projects. Familiar with React.js, Node.js, Express.js, REST APIs, data preprocessing, feature engineering, classification models, and generative AI. Seeking an entry-level Python Developer, Python Full Stack Developer, or Junior Machine Learning role.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, SQL
Frontend Technologies: HTML, CSS, React.js, jQuery
Backend Technologies: Node.js, Express.js, Flask
Databases: MySQL, MongoDB
API Development: REST APIs
Python Concepts: OOP, File Handling, Exception Handling, Modules, Functions, Data Structures, Collections
AI / Machine Learning: Machine Learning, Supervised Learning, Classification, Data Preprocessing, Feature Engineering, Model Evaluation, Generative AI
Libraries & Connectors: Pandas, NumPy, Scikit-learn, MySQL Connector/Python
Database Concepts: Primary Keys, Foreign Keys, Joins, CRUD Operations, SQL Queries
Tools & Platforms: VS Code, Git, GitHub, Version Control

EXPERIENCE

Codegnan Jun 2026 – Present
Python Full Stack Intern

- Built modular Python applications using OOP principles, structuring code into reusable classes, functions, and modules.
- Worked across the full stack: Flask and MySQL on the backend, React.js, HTML, CSS, and JavaScript on the frontend.
- Implemented MySQL database connectivity with CRUD operations, exception handling, and debugging in structured applications.
- Managed source code and project versions using Git and GitHub.

PROJECTS

Gym Management System *Python, MySQL & Python–MySQL Integration*

- Built a Python–MySQL gym management application with 3 core modules: member registration, attendance tracking, and trainer allocation.
- Implemented 5 operations (Add, Search, Update, Delete, Display) for member and gym records using MySQL Connector/Python.
- Designed relational MySQL tables with primary keys, foreign keys, joins, and SQL queries for storing and retrieving data.
- Applied OOP, exception handling, and file handling for structured, error-tolerant database operations.

Tech Stack: Python, OOP, MySQL, SQL, MySQL Connector/Python, File Handling, Data Structures

Malicious URL Detection Using Machine Learning *Python & Machine Learning*

- Developed a supervised classification model to label URLs as legitimate or malicious using labeled URL data.
- Engineered 4 feature groups during preprocessing: URL length, special characters, domain-related patterns, and suspicious tokens.
- Trained and evaluated the model with Pandas, NumPy, and Scikit-learn for data handling, feature preparation, and model evaluation.

Tech Stack: Python, Pandas, NumPy, Scikit-learn, Machine Learning, Data Preprocessing, Feature Engineering
